

FAQ Preparation

Here's the complete FAQ page — 32 questions across 6 categories, covering everything from this entire conversation. Here's what's included:

Setup & Installation (6) — system requirements, dependencies, API key setup, folder structure, package install

Running the App (5) — how to start, command-line options, available prompt commands, example questions, running tests

Agents & Routing (5) — all five specialist agents, how routing works, parallel dispatch, model selection, the review gate

Memory System (5) — STM vs LTM, what gets stored, how RAG/vector search works, context compression, resetting memory

Integrations (4) — demo mode, Jira, GitHub, and Slack connection instructions

Errors & Fixes (7) — every error encountered in this conversation with exact fix steps: `ModuleNotFoundError`, `NameError`, `AuthenticationError`, LangChain confusion, `SyntaxError`, and pytest failures

The page has live search filtering, smooth scroll-spy navigation, expand/collapse all, and opens cleanly as a standalone HTML file with no server needed.
